

Commissioners:

Please consider the interference to established and licensed spectrum users that BPL will cause. This interference will decimate not only the Amateur frequencies but also many frequencies used by the US Government.

Some countries have tried BPL and some of these countries have discontinued BPL because of the interference.

It is difficult enough to get the Electric Utilities to fix interference radiating from their electric lines and transformers now without increasing the interference one thousand fold with BPL.

Thank you for your time.

Denis J. Pieri
